

Start to assess your enterprise architecture

Go live with just 6 days' effort

Just like a health check keeps you fit, regular check-ups of your IT landscape ensure your business runs smoothly – and keeps improving over time. SAP LeanIX helps you to assess your enterprise architecture in a fast and effective way. Start to optimize with our HealthCheck Package, all it takes is 6 days' effort to onboard.

What is SAP LeanIX?

SAP LeanIX is a business suite developed to efficiently **assess, organize, plan and manage your enterprise architecture**, in close alignment with your business goals. It will help you:

- document the **as-is situation**: list and visualize all applications, the business capabilities they support, lifecycles, dependencies, ...
- **identify inefficiencies and redundancies** across applications prioritize ways to **rationalize, consolidate, standardize and optimize**
- design the **ideal IT architecture** and start **managing** it, **monitor** and start improving

Onboard in no time with [Flexso's HealthCheck Package](#)

To lower the threshold for starting with LeanIX and ensure a **quick time to value**, Flexso created the LeanIX HealthCheck Package: a **practical, hands-on approach** to identify your methods and needs, tailor and implement the tool, and train your users to assess your processes.

Intake and set-up

In a kick-off meeting and use case workshop, we give a short demo and explain how LeanIX can benefit your organization. We then **define the scope and roadmap**, and **identify users**. Once this is done, we **set up** the tool, putting the foundation for your enterprise architecture in place according to best practices.

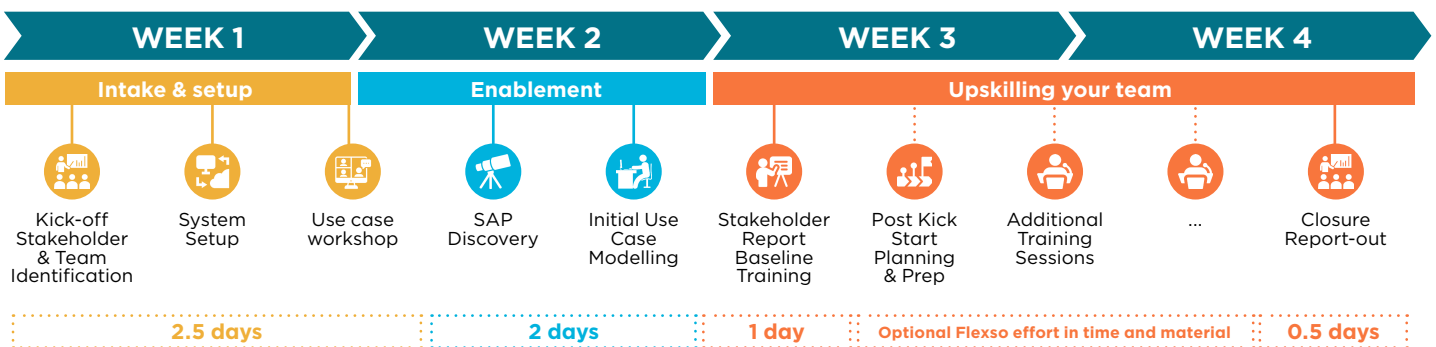

Enablement: knowledge sharing and best practices

To ensure full and effective ownership of the tool before go-live, we empower key users through **targeted training and workshops**. They will learn to navigate LeanIX and become familiar with modelling best practices for major IT systems. In addition, we identify **Enterprise Architecture champions** in your organization to sponsor and support future landscape optimization efforts. Optionally, a proof of concept for a specific use case can help them get started with SAP LeanIX quickly.

Upskilling your team (optional)

We can also offer **additional training and coaching** tailored to your needs. An expert-led Q&A session? Assistance to model complex or critical platforms or to configure your workspace? We got you.

Timeline and effort

Why Flexso's HealthCheck Package?

- **People + processes + technology**: Every successful project strikes the right balance between these 3 elements. This belief is the foundation of every transformation Flexso initiates.
- **Pragmatic and thorough**. No jargon or high-level recommendations, just to-the-point discussions and practical, hands-on advice.
- **Tailored to your needs**. We understand your business processes and align everything with your vision for the future.
- **Live with a 6-day effort**. In no time from kick-off and workshops to go-live.
- **Partnership**: We work alongside your team to ensure full ownership of the tool and processes even before go-live.
